Service Overview

Clarvix deploys autonomous AI agents that continuously monitor, analyze, and optimize your programmatic advertising stack. Our multi-agent architecture operates 24/7, making real-time decisions on floor pricing, fraud detection, and inventory management — reducing manual AdOps workload by up to 80%.

Each agent follows the OBSERVE-THINK-ACT-REPORT cycle: it ingests live data from your SSPs and ad exchanges, analyzes patterns using machine learning, executes optimizations (or recommends them), and reports findings via Slack, email, or dashboard.

24/7	3	15min	<80%
Autonomous Operation	AI Agents	Optimization Cycle	AdOps Workload Cut

Built for: SSPs, DSPs, Publisher Networks, Ad Networks, Yield Management Teams.

The AI Agent Roster

Each agent operates in the OBSERVE-THINK-ACT-REPORT cycle. All three can run independently or as a coordinated team.

01 Revenue Optimization Agent

Dynamic floor pricing and yield curve optimization using gradient boosting. Adjusts bid floors per geo, device, and time-of-day. Runs every 15 minutes.

02 Anomaly Detection Agent

Detects IVT (Invalid Traffic), revenue anomalies, traffic quality drops, and latency spikes using statistical models (z-score, IQR) and ML classifiers. Alerts via Slack.

03 Inventory Optimization Agent

Maximizes fill rates through placement scoring, demand forecasting, and unfilled impression recovery. Identifies underperforming ad units and recommends reconfigurations.

Service Tiers

Three tiers designed for different stages of AI adoption. Start with a Discovery blueprint, validate with Build, scale with Production.

Discovery **$1,500** One-time blueprint	Build & Test **$3,500** Dry-run deployment	Production **$7,500/mo** Full autonomous operation
+ Full AdTech stack audit and gap analysis	+ Everything in Discovery, plus:	+ Everything in Build & Test, plus:
+ AI agent architecture blueprint customized to your stack	+ 3 AI agents deployed in dry-run mode	+ 3 AI agents running live with auto-execution authority
+ Revenue opportunity mapping with projected ROI	+ Agents analyze your real data but only recommend (no auto-execution)	+ Real-time floor pricing adjustments
+ Competitive benchmarking against industry leaders	+ 2-week observation period with daily Slack reports	+ 24/7 anomaly monitoring with instant Slack alerts
+ 30-day implementation roadmap	+ Performance projections based on real data	+ Weekly trend analysis and monthly performance reviews
+ Delivered as a professional HTML/PDF report	+ Go/no-go recommendation for production deployment	+ 99.9% uptime SLA with dedicated support channel
		+ Dashboard access with full agent activity history

All tiers include a **free 30-minute discovery call** before engagement. No commitment required — we diagnose before we prescribe.

How It Works

From initial contact to autonomous operation in five steps.

01

You close a deal

Client signs for Discovery, Build, or Production tier.

02

We audit the stack

We analyze their SSPs, header bidding setup, ad server config, and data infrastructure.

03

Blueprint delivery

Custom AI agent architecture document with specific recommendations for their stack.

04

Agent deployment

For Build/Production: agents connect to their programmatic data feeds via MCP protocol.

05

Continuous optimization

Production agents run autonomously, reporting via Slack and dashboard.

Expected Results

Based on industry benchmarks for programmatic advertising optimization.

Metric	Impact	Details
Revenue increase	**+12-25%**	Through dynamic floor pricing and yield optimization
IVT reduction	**-40-60%**	Automated fraud detection catches what manual review misses
Fill rate improvement	**+8-15%**	Demand forecasting and placement optimization
AdOps time saved	**80%**	Agents handle monitoring, alerting, and routine optimizations

Ready to Deploy AI Agents?
